

TARGET 1:

Under this 15 days target 3 tasks were given in which 1st task was to design a clear and user-friendly web interface. Which was done by basic styling and HTML

After that, I added the task button and was told to add it to the interface which I added using JavaScript.

TARGET 2:

After Creating the primary interface with the add task button next was to create task details and a title that the user could enter. The task was completed successfully with the help of JS and HTML.

TARGET 3:

The final task for the 15-day submission was to show all the tasks on the main page and also tell the completion status. So to implement it as soon as the user clicks on the add task button it gets added to the main page top with three buttons below that were completed not completed and deleted with basic CSS to make it look good
