

TARGET 3

TARGET 3.1

Optimize navigation for effortless movement between task lists and categories.

These 15-day targets were basically for the visual refinement and user experience. So this time it was basically working on the CSS part which is my favorite part as it gives visuals and makes the page look beautiful.

So the first target was to make effortless movement between tasks lists and categories on my page it was already there because the task category was added by me at the next line of the task title so that it becomes easy for the user to navigate between them also I added a box in top right as the task gets added it will show the list of tasks with the category making it more convenient for the user.

TARGET 3.2

Implement user-intuitive task editing options, including task completion and deletion.

This was also done by first only as the buttons like completed not completed and delete and also a button to edit the task were added which work functionally. To make it look more enhancing I made animation effects in the button as we hover the mouse over them so it gives a smooth experience.

TARGET 3.3

Enhance visual aesthetics by introducing subtle color codes tied to task categories.

Under this target it was basically to give visuals to the category by making them of different colors I tried a lot to do that but it didn't work well when it worked well some other function stopped working so I was unable to achieve this but the page i gave the futuristic theme by using green black and neon colors to make it look futuristic I also added the due date function but it's not working well in future I will improve it.
